FACT SHEET
About the COVID-19 vaccine
The US immunization protection system ensures that all vaccines are as safe as possible.
Some vaccines you need to get two vaccines in different moments but there is a vaccine available that you get only one vaccine. And they are all good and protect you from COVID-19.
Pregnant women should talk to their doctor about their pregnancy status and COVID-19 vaccination status.
Vaccines can cause body weakness, muscle aches, fatigue, or high fever in some people. For most people, these symptoms will not last more than a day or two.
