

Get The Facts Translation Key

To quickly reference the English version of any translation you download and post to your site, check the number in the bottom right corner of each image. The translations below correspond with each number.

1. Vaccines are FREE for everyone, regardless of your immigration status or whether you have an ID or medical insurance.
2. The vaccine protects you from getting COVID-19. If you still get COVID-19 after you get vaccinated, the vaccine protects you from getting seriously ill.
3. Even if you had COVID-19, you should still get vaccinated.
4. COVID-19 vaccines are safe and effective.

5. The vaccine CANNOT give you COVID-19.
6. It is safer to get the vaccine than getting COVID-19.
7. No other vaccine has been tested as much for its safety in U.S. history. Millions of people have been safely vaccinated.
8. No other vaccine has been tested as much for its safety in U.S. history. The vaccine has been proven safe for thousands of people, including those of different races, ethnicities and ages.
9. The COVID-19 vaccine does not change your DNA.
10. Side effects are normal. Side effects do NOT mean you have COVID-19.
11. Side effects are normal. Side effects mean the vaccine is teaching your body how to fight COVID-19.
12. Side effects are normal. Side effects may include pain or swelling on your arm where you get the vaccine, headache, chills, or fever.
13. There is no evidence the vaccines cause fertility problems.
14. The COVID-19 vaccine is halal. The COVID-19 vaccine contains no animal products. The COVID-19 vaccine does not change your DNA.
15. The COVID-19 vaccine is halal.
16. The COVID-19 vaccine contains no animal products.
17. Vaccines DO NOT contain: Preservatives, eggs, pork products, gelatin, latex, or any live COVID-19 virus.
18. Even after getting the vaccine, continue to wear a mask, practice social distancing, wash your hands often and disinfect high-touch areas frequently.
19. Vaccines are FREE for everyone, regardless of your immigration status.
20. You do not need insurance or to show an ID to get a free vaccine.
21. No one can be denied a free vaccine and no one can make you pay for the vaccine.

22. Viruses are always changing. When a big change happens, scientists call it a new variant. Some variants are much easier to catch and spread to others.
23. Vaccines protect against variants. If you are not up to date on your vaccines, you are much more likely to get COVID-19, get seriously ill and spread it to others.
24. Very young children, teens and adults are getting sick from COVID-19. Everyone is safer when they are vaccinated.
25. You can stop dangerous variants by getting vaccinated. Help stop COVID-19.
26. Some variants of COVID-19 are much easier to catch and spread to others. Even after you are vaccinated, wear a mask for the most protection.
27. Very young children, teens and adults are getting sick from COVID-19. The best way to protect children and youth is to get them vaccinated.
28. Vaccines protect children from getting COVID-19. If children do get sick, the vaccine prevents them from getting seriously ill.
29. When your child is up-to-date on their COVID-19 vaccines, they will be safer when attending school, playing sports, and visiting friends and family.
30. Vaccinating children and youth protects the whole community.
31. Vaccines were made quickly because there was decades of previous research that scientists could use.
32. Vaccines were made quickly because governments spent a lot of money to develop and test the vaccines.
33. Vaccines were made quickly, but only the vaccines that were proven safe were approved for use.
34. Vaccines teach your body to recognize and kill the virus that causes COVID-19.
35. Side effects mean your body is learning how to fight the virus. This way, if you get the virus, your body can quickly kill it.
36. Most people who get seriously ill from COVID-19 are not up-to-date on their vaccines.

37. COVID-19 vaccines work very well. Even when breakthrough infections happen, the vaccine still protects almost all vaccinated people from becoming seriously ill or dying.
38. You can prevent breakthrough infections in your community by wearing a mask, even if you are vaccinated.
39. Regardless of whether masks are required in your area, you and your family will be safest if you wear a mask.
40. It is possible to be sick with COVID-19 and not know it. In this case, wearing a mask makes it less likely that you will spread the virus to others.
41. Getting a vaccine and wearing a mask are the best ways to avoid getting sick and spreading COVID-19 to others.
42. Because COVID-19 spreads very easily, wearing a mask protects you, your friends and family, and your community.
43. Even vaccinated people are safest with a mask.
44. COVID-19 vaccines do not affect people's ability to have children. There is no evidence the vaccines affect women's ability to get pregnant, nor do they affect men's reproductive ability.
45. COVID-19 vaccines are safe for caregivers who are pregnant or breastfeeding.
46. When you get vaccinated you also protect your children, because it makes you less likely to infect your loved ones.
47. COVID-19 vaccines are safe for couples, pregnant women and new parents.
48. COVID-19 boosters have the same ingredients as the original vaccines, which have been proven safe for hundreds of millions of people.
49. Boosters are shots you get after you are fully vaccinated so that you can stay protected against COVID-19.
50. Scientists have found that with some vaccines a person's protection decreases over time, and a booster helps them stay protected. The COVID-19 booster works the same way.

51. Boosters are free for everyone regardless of your immigration status, or whether you have health insurance or an ID.
52. People are getting tested regardless of whether they are vaccinated and regardless of whether they feel sick because it makes our communities safer.
53. Anyone can get tested for COVID-19, including adults, children and babies.
54. Because the symptoms of COVID-19, influenza (the flu) and the common cold are very similar, the only way to know if you have COVID-19 is to get tested.
55. You may be able to get a test at a doctor's office, a community testing site, work, school, or a pharmacy. Many pharmacies also carry at-home tests you can do yourself.
56. You can get a confidential test regardless of your immigration status or whether you have medical insurance or an ID.
57. Some tests give you results right away, and other tests may take a day or more. Protect others if you feel sick by staying home, wearing a mask, and practicing social distancing.
58. If you test negative, test again if your symptoms don't go away or as often as needed to make sure you continue to protect your community.
59. If you test positive, take care of yourself by resting, drinking lots of water, and calling a doctor if your symptoms get worse.
60. Staying home from work, school, or social events if you test positive or anytime you feel sick is one of the most important things you can do to protect your community.
61. People who get the flu and COVID-19 at the same time may be at even higher risk for severe complications and death.
62. Get the COVID-19 vaccine and the flu vaccine for the most protection. Both protect you, your family, and your community.
63. It is safe and effective to get both the COVID-19 vaccine and the flu vaccine at the same time.
64. Being up-to-date means getting both doses of a two-shot vaccine, and then getting any booster shots you are eligible for.
