

Medical Requirements for Humanitarian Parole under Uniting for Ukraine

Attestation Within 90 Days After U.S. Arrival

COVID-19

The first dose of the COVID-19 vaccine is a pre-arrival requirement for all individuals six months and older. All individuals must attest that they will complete the recommended primary vaccine series upon arrival to the U.S.

WHO DO THESE REQUIREMENTS APPLY TO?

- + All individuals six months and older

MUST BE COMPLETED WITHIN 90 DAYS OF U.S. ARRIVAL

Polio

This is a pre-arrival requirement. If your child was not vaccinated against Polio prior to travel, you will need to get your child vaccinated within 90 days of arrival in the U.S. or when they reach vaccine approval age (6 weeks and older).

WHO DO THESE REQUIREMENTS APPLY TO?

- + All individuals 6 weeks and older

MUST BE COMPLETED PRIOR TO U.S. ARRIVAL

Tuberculosis

An **interferon-gamma release assay (IGRA) blood test** is needed to fulfill the Tuberculosis Screening requirement.

WHO DO THESE REQUIREMENTS APPLY TO?

- + All individuals two years and older

MUST BE COMPLETED WITHIN 90 DAYS OF U.S. ARRIVAL

** Some exceptions may apply to these health requirements. Please see the [USCIS U4U Vaccine Attestation page](#) for more information ([English](#), [Russian](#), [Ukrainian](#)).*

Attestation Within 90 Days After U.S. Arrival

If you are in the U.S. and have received humanitarian parole under Uniting for Ukraine (U4U), you completed a pre-travel vaccine attestation before being granted parole. You will need to complete another attestation within 90-days after arrival to the U.S. **This document provides important information related to the attestation within 90 days after U.S. arrival.**

COVID-19 Vaccine

The first dose of the COVID-19 vaccine is a pre-arrival requirement for all individuals six months and older. All individuals must attest that they will complete the recommended primary vaccine series upon arrival to the U.S.

If you attested that you or your child received at least one dose of an approved COVID-19 vaccine pre-travel, but were not fully vaccinated, you will need to:

- ✓ Complete a recommended COVID-19 primary vaccine series within 90 days after arrival. For humanitarian parole under U4U, “fully vaccinated” for COVID-19 means that you have completed your primary vaccine series according to current [Centers for Disease Control and Prevention \(CDC\) guidelines](#).

If you attested that your child had not received at least one dose of an approved COVID-19 vaccine pre-travel, but qualified for an exception to this requirement because they were too young, you will need to:

- ✓ Have your child start a COVID-19 primary vaccine series within 90 days of arrival to the U.S. or when your child reaches the eligible age (six months and older), whichever is later. Your child will also need to complete the recommended primary vaccine series, so they are considered fully vaccinated.

Polio Vaccine

This is a pre-arrival requirement for all individuals 6 weeks and older.

If you attested that your child was not vaccinated against Polio prior to travel, you will need to:

- ✓ Get your child vaccinated for Polio within 90 days of arrival in the U.S. or when they reach vaccine approval age (6 weeks and older).

Tuberculosis (TB) Screening

Parolees two years and older must complete an interferon-gamma release assay (IGRA) blood test to fulfill the Tuberculosis Screening requirement and the required attestation within 90 days after U.S. arrival.

You will need to attest to one of the below:

- ✓ **Negative test result.** This means the IGRA blood test result came back negative and you do not have TB.
- ✓ **Indeterminate test result.** This means the IGRA blood test result came back uncertain. If this happens, on the attestation, you will need to agree to have more testing and follow-up with a medical professional. The place where you got tested will tell you what steps to take next.
- ✓ **Positive test result.** This means the IGRA blood test result came back positive for TB. If this happens, you will need to get a chest x-ray to see if the TB is active or not. If you receive a positive test result, you must attest that you will get treated and follow medical recommendations.

It is important to keep a copy of all test results and documentation to prove that you have followed all the recommended testing and treatment.

** Some exceptions may apply to these health requirements. Please see the [USCIS U4U Vaccine Attestation page](#) for more information ([English](#), [Russian](#), [Ukrainian](#)).*

Where can parolees make their attestation?

Within 90 days of arrival in the U.S., parolees must complete their attestation in their [USCIS online account](#).

Not completing the health requirements of U4U, could put your parole, and any future application for asylum or any other immigration benefit at risk, including possible termination of parole.

It is important to ask your doctor for a copy of your health record and to keep your record in a safe place.
